

UNIVERSITY OF TWENTE.

APPLICATION DEVELOPMENT

LECTURE 1: INTRODUCTION TO JAVA AND ECLIPSE

```
class AppDev {  
    Java  
}
```

Part of **SmartProducts**

INTRODUCTION

APPLICATION DEVELOPMENT

- Intro to:
 - Java
 - Eclipse

INTRODUCTION TO JAVA

Java

```
source code;  
class LetsParty {  
do interactive;  
while  
(wholeNight)  
}
```

CLASS: DEFINES OBJECT

```
class Dog {  
    // properties:  
    int hairLength;  
    int age;  
  
    // methods:  
    run();  
    bark();  
    sit();  
}
```

Properties:
things an
object
has/knows/
stores

In Java, these
properties can
be variables or
objects

Methods: things
an object can do

Map

A NEW DOG

```
// let's create a new Dog:  
Dog rufus = new Dog();
```

*rufus is an object,
defined by a class*

let's make rufus do something:
rufus.sit();
rufus.bark();

METHODS

```
type name()  
    // body  
}
```

- Describe what an object can do
- Contains set of instructions (code)
- May have input- and output parameters

head
body
between { }

```
// method which takes care of running:  
void run(int speed) {  
    // code which drives motors  
}  
  
// method which takes care of barking:  
void bark(int volume) {  
    speaker.play("BARK.mp3", volume);  
}
```

CODE STRUCTURE

```
/**  
 * Comment  
 * @author  
 */  
  
import java.library;  
  
class MyFirstApp {  
    public static void main(String[] args) {  
        // body of method  
        // contains instructions  
        System.out.println("Hello world!");  
    }  
}  
  
Closing bracket: ends code block
```

Opening bracket: start of code

main-method is start of program

Each line of code ends with a **semicolon ;**

[Java Cheat Sheet](#)
[on site →](#)

source file (.java)

class

method1

statement;

method2

statement;

statement;

What goes in a source file?

```
public class Dog {
```

```
}
```

What goes in a class?

```
public class Dog {
```

```
void bark() {
```

```
}
```

```
}
```

What goes in a method?

```
public class Dog {
```

```
void bark() {
```

```
    statement1;
```

```
    statement1;
```

```
}
```

```
}
```

NAMING CONVENTIONS

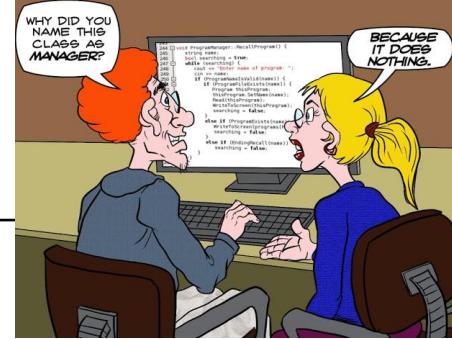

NAMES SHOULD...

Class name: starts uppercase (capital)

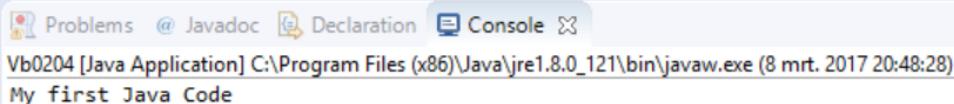

```
class TemperatureSensor {  
    // properties:  
    double temperature;  
    int age;  
  
    // methods:  
    double getTemperature() {}  
    void probe() {}  
    void reset() {}  
}
```

Variable & method
names: start
lowercase

- be short yet meaningful
- not start with a number
- not contain special-characters or spaces

TEXT OUTPUT

Head First: p6-13 *Aan de slag met*: 5.2.3

- Print a line of text:

```
System.out.println("My first Java Code");
```

Print (a line) to standard output

Text between quotes is a
String (of characters)

- Print *good morning*... if hour is smaller than 12:

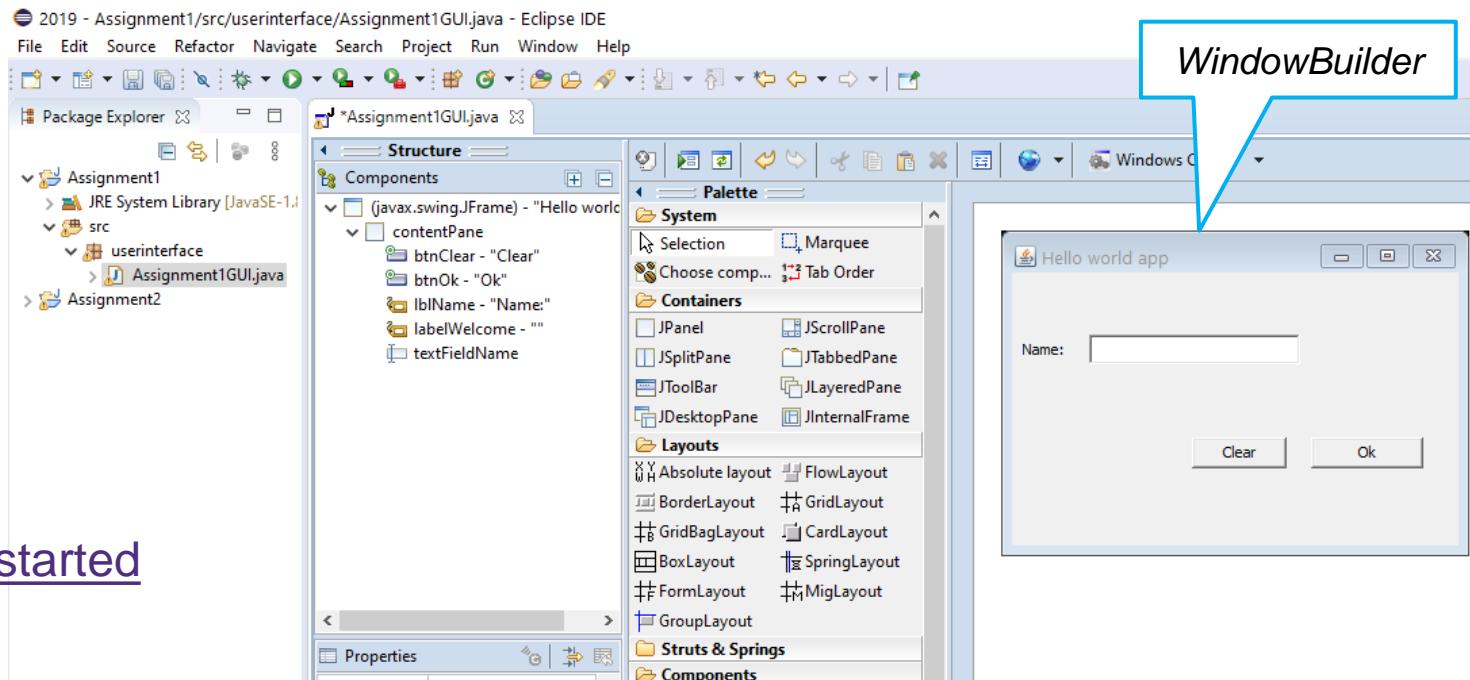

```
if ( LocalDateTime.now().getHour() < 12 )
    System.out.println("Good morning");
```

ECLIPSE

INTEGRATED DEVELOPMENT ENVIRONMENT (IDE)

- Create and organize applications
- WindowBuilder: design graphical userinterfaces

[Watch "Getting started with Eclipse"](#)

DESIGN AN APPLICATION

top

analyze > design >> implement

- Analyze: sketch ideas, think (out loud), find (sub) questions, (re) search, specifications
- Design: sketch (concepts), describe (functions, methods), map (real world→class), pseudo code
- Implement : write code, draw (with computer), detail

down

Next week: more on designing apps
